

Final Project Ideas

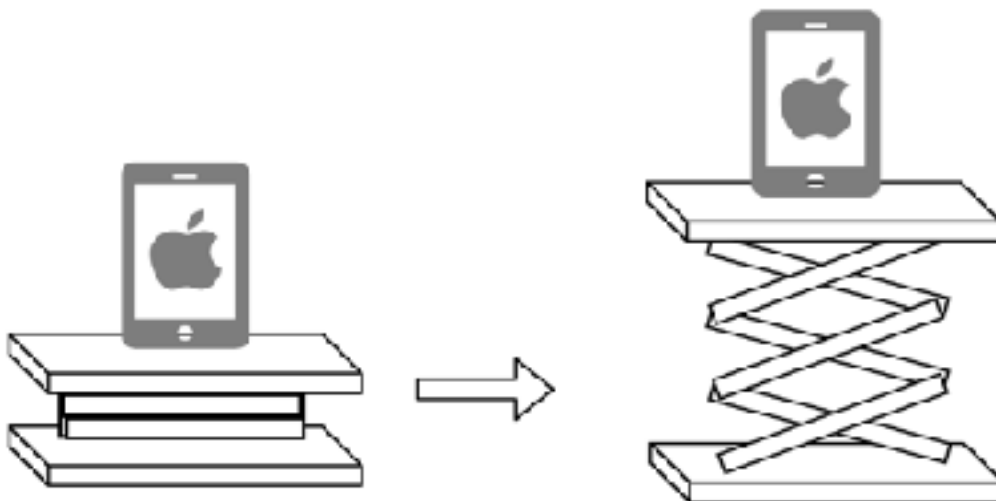

1. Ring Holder Box

The box has ring holders inside. There would be two buttons to control this box. One button is to bring the ring holder outside of the box, and the other is to make the ring holder go back into the box.

2. Electronics Lift

This electronic lift changes in height and we can place any electronic item on top of it. The height is controllable through a lever.

Stretch goal for both ideas: add laser cutting decorations and LEDs as signals of usage
